

HFD TYPE PLATE FILTER

Purpose: Dewatering the sludge from wastewater treatment plant.

Application: Sludge from WTP
Metal Finishing Waste
Electroplating Industry
PC Board Industry
Milling Industry
Chemical Processing Industry

In the plate filter press, dewatering is accomplished by forcing the water from the sludge under high pressure. The sludge is pumped into the filter press chambers and the filtrate is pressed through the filter clothes as pumping pressure increases. The dewatered sludge is retained inside the press chambers and moved as the sludge cake after a press run.

Procedure

Advantages:

- ✱ Suspending Design. Easy to remove and re-assemble, easy to operate and maintain.
- ✱ Parts assembling. Easy to dispart and re-assemble while moving.
- ✱ Hydraulic pressure. Auto plate open.
- ✱ Sludge cake carried away by conveyor
- ✱ Cycling backwash water clean up
